Since we are paying for a premium service by subscribing to satellite radio, this should show the NAB that they are not providing the services we find necessary. Having weather and traffic available 24/7 is a valued service when traveling. You don't lose the signal because you are out of range of the "local stations". Why should the NAB be able to tell me that I have to listen to an hour's worth of unnecessary programming to hear the "traffic report" for the area I am not interested in. The satellite traffic is continually updated and readily available.

Please leave satellite traffic and weather alone.....
